Strategic Framework:					
Implement suppression strategies that provide the highest probability of success to minimize impacts to identified values at risk, and that ensures firefighter and public safety are the top priority					
Specifically manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when exposure is commensurate with values threatened and the probability of achieving objectives is high.					
Leaders Intent:					
Engage in all work assignments with a high degree of professionalism and provide excellent customer service to all parties involved with the incident. All assigned personnel should:					
* Exhibit professional behavior					
* Ensure effective communication					
* Manage personal safety and the safety of others					
* Conduct effective fatigue management and implement work/rest cycles					
6. Management Objectives and Requirements					
Implement operational plans that establish holding features across the entire perimeter to minimize the duration and physical extent of the fire and that results in protection of:					
* The communities of Agness, Oak Flat and Illahee					
* Scattered primary and secondary residences					
* Private timber lands					
* Recreational resources; specifically the Rogue and Illinois River corridors					
* Infrastructure including communication sites, historic buildings, and improvements					
* Natural and cultural resources					
Maintain effective relationships by ensuring dialogue and timely information between the IMT, affected agencies, and the public. Specifically communicate daily with Cooperators and Agency Administrators, issue press releases twice daily, schedule public meetings as needed, and be available in all communities affected by the fire. Specifically, provide an in-person presence in the Agness community to deliver information as needed.					
Coordinate all fire suppression work with Resource Advisors to protect natural and cultural values					
7. Operational Period Command Emphasis					
Maintain situational awareness through effective communication and conduct through risk assessments before engaging in work assignments. Ensure that all responders understand and know how to use the Medical Incident Report, Medical Plan, and Incident Within and Incident Protocol.

Flat Fire

National Weather Service Medford

Spot Forecast for Flat Fire...USFS
National Weather Service MEDFORD OR
538 PM PDT Mon Jul 17 2023

Forecast is based on forecast start time of 1800 PDT on July 17.
If conditions become unrepresentative...contact the National Weather Service.

...RED FLAG WARNING REMAINS IN EFFECT FROM 11 PM THIS EVENING TO 8 AM PDT TUESDAY FOR EAST WIND WITH POOR OVERNIGHT RH RECOVERY...

DISCUSSION...Poor to moderate overnight recoveries are forecast the next couple nights, so critical RH values are expected tonight and Tuesday night, and this includes the ridges of the southern coastal ranges. Observations from the Agness RAWs shows elevated winds all night, which suggests the inversion is setting up lower than the listed height of the station at 247 ft. AGL. Elevated fire weather conditions may develop each day this week, and the focus will be on when/where the wind speeds will reach critical values. There is some uncertainty when critical wind/RH will overlap, but the main takeaway is conditions may be near critical each day with no rainfall in the forecast for the foreseeable future.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 2	TYPE OF FIRE: Wildfire
FIRE NAME: Flat Fire	OPERATIONAL PERIOD: 7/18/23, Day Shift/Night Shift
DATE ISSUED: 7/17/23	TIME ISSUED: 1900
UNIT: OR-RSF	SIGNED: /s/ Roy Walker, FBAN

Weather Summary

****See attached Fire Weather Forecast****

Fire Behavior Summary

GENERAL: The Flat fire is burning into fire scars from the Klondike Fire (2018) and the Biscuit Fire (2002). The fuels are a mix of burned and unburned areas with very heavy dead and down pockets.

Fuels models are primarily TU5 with timber understory, brush and heavy dead and down fuels. Cured grass at the lowest elevations near Oak Flat.

Terrain is very steep greater than 50% in most locations dissected with two north/south running drainages, the Illinois River and Horse Sign Creek.

Spotting Distance: 1000 to 2000 feet,

POI: 65%

Rates of spread to 15 ch/hr with flame lengths up to 10' at the head of the fire.

ERC's in the local area are near the 90th percentile locally, trending upward towards the 95th percentile later in the week.

DIV A: The fire will continue to back and flank to the proposed lines. Watch for slope alignment towards the line with potential spread rates of 10-15 chains per hour with spotting to .1 miles.

DIV Z: Watch for head fire towards primary line from the Illinois River to the west. The rest of the division will stay active moving towards the south and southwest. Spotting distances of up to .2 miles from the ridge tops.

DIV D: Expect to see continued active spread to the south following Indigo Creek and the Illinois River.

Night Shift: As the diurnal wind changes after dark, watch for increased backing towards both DIV A and DIV Z near Oak Flat. The higher ridges will remain active through the night.

AIR OPERATIONS: Expect the inversion to lift by late morning.

Safety

Take the time to watch how the fires react to changes in humidity and winds and how they burn on different aspects. Remember, fire behavior tends to heat up the most on SW aspects by late afternoon.

- Implement steps to ensure safety

HAZARD MITIGATION THROUGH RISK MANAGEMENT

The Risk Management Process assists in ensuring that critical factors and risks of the fireline work environment are considered during decision-making. Good risk management utilizes a six-step process:

Risk Management Cycle

“Risk Management doesn’t get in the way of doing the mission – it is the way we do the mission.”
